**How to send sample:**

- Use plastic bottle for sample collection which has only ever contained water (i.e. No soft drinks, milk, fruit juice etc.).
- Rains the bottle with water which is subjected for testing. Avoid raising bottle with tap water before collection of sample.
- Collect about 400 mL of sample in bottle and seal it immediately.
- Ensure to prevent any leakage by properly taping the lid.
- Label the sample bottle/bottles properly in such a way that it clearly represents sample identification number. Fill the water testing form with maximum information as you can provide.
- Send the sample with duly filled form for analysis.

**Note:** For detailed information on sample collection procedure visit our website [www.plantneeds.com.au](http://www.plantneeds.com.au).
